

Hello, we are

dartmoon

dartmoon.io

/ the moon is rising

Look. Everyone's running around like crazy, so let's cut to the chase.

We don't "make websites", **we build damn Launchpads**. We're the ones breaking s., tearing it down, putting it back together, but better ofc.

Underground vibes, raw processes, bureaucracy can take a hike. A lab that turns half-baked ideas into products that actually take off. **Brutal, pragmatic, results-focused approach.**

But here's the thing: without **rock-solid foundations**, your launchpad crumbles. That's why we've got deep skills in some of the most bulletproof stacks out there... Laravel... WordPress... yeah, we could go on but who's got time?

We don't want "clients" **we want partners who get it.**

Fair warning: we don't sell magic tricks. **We deliver fast execution, smart tech choices, and results you can actually measure.**

Ground control

We built Dartmoon with one thing in mind: most software being shipped out there is slow, bloated, and built by people who stopped caring about the problem halfway through.

We care, obsessively.

We're here to make the tech industry less mediocre, one brutal, well-crafted project at a time.

That's the mission, everything else is noise.

Our missions

An illustration of a space station control room. Four astronauts in white suits are working at consoles. One astronaut is standing and pointing at a large screen displaying a constellation. A Siamese cat sits on the floor in the foreground, and a yellow rubber duck is on a console to the right. The background shows a large planet and stars.

Launchpad: build it, sell it, fly it

Turnkey website + e-commerce + everything needed to take off.

Not just websites, our Launchpad is your **full-on, turnkey setup**. Perfect for small businesses, artisans, or anyone who wants to sell online without headaches. We design it, build it, launch it, and keep it alive with yearly maintenance. From sleek showcase sites to **PrestaShop** and **WooCommerce** stores, every **Launchpad comes ready to convert and scale**.

- * **Day-one ready: live, selling, performing.**
- * **No juggling partners: one crew handles design, dev, launch, and upkeep.**
- * **Built to grow: add features, expand, and upgrade whenever you're ready.**

Orbit: Systems that keep your mission in motion

CRM, research, innovation, R&D, systems that orbit around your business.

When your business outgrows spreadsheets and chaos, Orbit builds the backbone.

CRMs, ERPs, dashboards, automations: turnkey systems tailored to small and mid-sized companies who need clarity and control. We don't dump bloatware, we craft tools that actually make sense. From lead tracking to automating boring tasks, **we give you back time and visibility.**

- * Tighter operations, less chaos.
- * Real-time visibility and insights.
- * Faster, smarter decisions.

Docking: your crew, our lab. All systems go

Team as a Service. Extend or replace teams, collabs, mashups, mix-and-matches.

Docking is where we link up with agencies, software houses, or bold startups who need extra firepower. This isn't "rent-a-dev", it's partnership. **You bring the mission, we bring a seasoned crew that codes, integrates, and ships.**

Whether it's **custom development, T.a.a.S.**, or pure **R&D**, we plug into your workflow. Less onboarding chaos, more raw output.

- * **Gain skills and speed without the hiring overhead.**
- * **Scale your team up or down as needed.**
- * **A crew that already works as one unit = faster execution.**

Labs

discover

Labs: this is where things get weird (in a good way!).

Labs is **Dartmoon's raw R&D** engine: no filters, no client briefs, no strings attached, no deadlines imposed by someone else's roadmap. Just us, a problem worth solving, and the **obsessive need to build something that shouldn't exist yet.**

Prototypes, open source tools, experiments that may ship or may not. Either way, we learn something that makes the next project better.

If it came out of Labs, well, it started as a crazy idea at 2am.

Giving back

discover

We build systems that scale, but we haven't forgotten that the most important things don't always have a business model. That's why a chunk of our time goes to projects that matter outside the screen.

ADAS | Associazione Difesa Animali Sandonatese
20 years of giving shelter, food and care to animals in the Basso Piave area. We help keep their operations running.

Lary | Il Mondo dei Gattini
Ilaria has been saving neonatal kittens since 2014, one at a time, against all odds. We make sure her voice reaches further.

The crew

An illustration of four astronauts in grey suits standing in a field of green grass and purple flowers. In the background, there are two planets and three spaceships with blue trails. In the foreground, a Siamese cat sits next to a yellow rubber duck. A cyan arrow points from the word 'discover' to the duck.

discover

We're small... on purpose! Every person in this lab is here because they're genuinely exceptional at what they do, not to fill a headcount.

Alessandro Pasqualini

CEO and Full-Stack Developer

The brain and the caffeine-fueled engine. He architects entire digital universes from scratch, codes best when the world sleeps, and is probably already three commits ahead of whatever problem you're describing.

Gianluca Rorato

COO and Full-Stack Developer

The operations brain. Nearly 2 meters of pure systems thinking, he doesn't just work inside the grid, he redesigns it. Your co-pilot for projects that don't just work: they dominate.

to be continued...

/ the moon is rising

Andrea Beggio

Full-Stack Developer

Rising fast. Sharp instincts, genuine curiosity, and the rare ability to pair a perfect craft beer with a brutal bug fix. Something legendary is being forged here.

Daniela Esposito

Junior Full-Stack Developer

Fresh from the academy, asking dangerous questions, already contributing to live missions. She's learning at warp speed and keeping pace with veterans from day one.

Mr. Cat

Recruiter

Meet Mr. Cat, our dedicated recruiter who expertly matches talent with opportunity. With a sharp eye for potential and a friendly approach, he ensures we onboard skilled professionals who fit our company culture, creating a team that excels in delivering outstanding software solutions.

Mrs. Ducky

Debugger

Mrs. Ducky is our quiet, all-knowing companion. She listens. She absorbs. She reflects back the truth you were too close to see. Mrs. Ducky doesn't write code, but she's untangled more logic knots than most engineers combined.

Houston, we have lift-off!

The moon is rising. Are you on board?

Most agencies will tell you what you want to hear.
We'll tell you what needs to be done.

Still interested?
